Transformers and Generators

■ We repair and rewind transformers and generators using quality materials, expert workmanship and testing. Additionally, we provide a full coverage warranty on the entire unit.

We continue to pursue partnership opportunities with current and new customers through the expansion of our portfolio of services.

Warranty

Procedures

1. Evaluation

JF Automation inspects & tests electrical and mechanical parts and components.

2. Repair

Problems found during the evaluation process are addressed. Parts and components are repaired or replaced as needed. Our complete motor re-winding process includes:

- Disassembly & burn off
- Repair all windings (washed, baked & tested)
- Repair or replace brush holders, insulation tubes, sensors, encoders, seals and replacement connectors
- Additional: Dip, bake, clean and repainting as required.

3. Assembly & Testing

Parts and components are assembled and retested.

4. Final Testing

Final testing ensures the unit is in 100% working condition.
